DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

1. Claims 1-13, 89-91 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent NO. 6360888 to McIvor et al.

McIvor teaches a sensor with a substrate with notches cut in the substrate to form a neck down region in the substrate and a sensor electrode formed from conductive layer

Art Unit: 3763

wherein the notches cut in the substrate do not expose any sensor electrodes to analyses, further including a slotted needle having a slot. (figures 1-2, 13-15)

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent NO. 4543958 to Cartmell .

Cartmell teaches a sensor with a substrate with notches cut in the substrate to form a neck down region in the substrate and a sensor electrode formed from conductive layer wherein the notches cut in the substrate do not expose any sensor electrodes to analyses.

3. Claims 1-13, 89-91 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent NO. 5390671 to Lord et al.

Lord teaches a sensor with a substrate with notches cut in the substrate to form a neck down region in the substrate and a sensor electrode formed from conductive layer wherein the notches cut in the substrate do not expose any sensor electrodes to analyses, further including a slotted needle having a slot.

4. Claims 1-3, 6-13, 89-91 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent NO. 5391250 to Cheney II et al.

Cheney teaches a sensor with a substrate with notches cut in the substrate to form a neck down region in the substrate and a sensor electrode formed from conductive layer wherein the notches cut in the substrate do not expose any sensor electrodes to analyses, further including a slotted needle having a slot.

5. Claims 1-3, 6-13, 89-91 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent NO. 6461496 to Feldman et al.

Art Unit: 3763

Feldman teaches a sensor with a substrate with notches cut in the substrate to form a neck down region in the substrate and a sensor electrode formed from conductive layer wherein the notches cut in the substrate do not expose any sensor electrodes to analyses, further including a slotted needle having a slot.

Double Patenting

6. Claims 1-13, 89-91 rejected under the judicially created doctrine of double patenting over claims 22-97 of U. S. Patent No. 6484045 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: the applicants claims are a broad version of the patent claims.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Response to Arguments

7. Applicant's arguments with respect to claims 1-3, 6-13, 89-90 are have been considered but are most in view of the new ground(s) of rejection.

Application/Control Number: 09/779,282 Page 5

Art Unit: 3763

8. Applicant's arguments filed 4-13-20065 have been fully considered but they are not persuasive.

- a. Applicant alleges McIvor does not teach a notch however definition of a notch is "An indentation at the edge of a structure", which McIvor teaches.
- b. In response to applicant's arguments, the recitation implantable has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).
- c. In response to applicant's argument that implantable and non-necked region is adapted for placement within the body, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roz Maiorino whose telephone number is 571- 272-4960. The examiner can normally be reached on 9am-5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nicholas Lucchesi can be reached on 703-308-2698. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
